Subject: Site Priority Reranking: Red Horse Truck Stop, 1342 Trollingwood Road,
Mebane, Alamance County, Incident Number 10119

Dear Mr. Hall:

Senate Bill 1317 temporarily suspends the requirement to cleanup contamination from an underground storage tank release for low priority sites. In addition, Senate Bill 1317 requires the Department of Environment, Health and Natural Resources (Department) to notify underground storage tank owners, operators or other responsible parties, as applicable, of the Department's site priority ranking score for contamination incidents resulting from the release of petroleum at their site. The initial notification was done in a letter to you dated July 17, 1996. At the time, your site was assigned a priority ranking score of D070 which is considered a low priority site. New information has been brought to our attention that affects the ranking of your site. By this letter, we hereby notify you that the priority ranking score for your site has been changed to B070 which is considered a high priority site. This change in your ranking score is due to the following conditions:

- ▶ A Supply well has been identified within 1,500 feet of the contaminant plume.

I have enclosed a description of the Department's site priority ranking categories and a brief explanation of what the score means. If you know of any reason why this ranking score may be incorrect for your site, please contact me at the letterhead address or telephone me at (910) 771-4608 ext. 282.

Sincerely

W. Waddell Watters
